

TOUCH-UP

PAINT KIT CONTENTS: 2 or 3 CONTAINERS DEPENDING ON FINISH – VARIOUS PAINT SHADES

How To TOUCH-UP SMALL AREAS

Scratches and small damaged areas can be touched up easily. Not all colors supplied are necessary for the touch up job. Size, color and depth of damaged area will determine which touch up colors to use.

1. Dilute latex touch up paint with about 30% water in a small plastic or paper cup.

2. Apply small amount of diluted paint to moist cloth, small brush, sponge, or Q-tip. Dab into desired area. If applied to undamaged areas, wipe quickly with clean damp cloth. Start with lighter colors first, let color dry 10 to 15 minutes before applying the darker shades.

3. Wipe excess paint off immediately. It is better to apply a small amount in translucent shades and darken the area gradually to blend in. Keep dabbing and blending with clean damp cloth until repaired area blends in with its surroundings.

NOTE: You might have to mix different colors to achieve different shades. Add water as needed and dab excess paint off for a more transparent look.

LARGER REPAIRS

Small pieces of broken stones can be glued back with super glue or 5 minute epoxy (glue not included); then retouch with colors in the touch up kit if necessary.

If a broken piece is missing or repairing a deep gouge, fill the damaged area with bondo (may be purchased separately at any local Do-It-Yourself store) imitating the stone texture. Apply colors in the touch up kit as needed. (See above instructions).
